

I would like to give my whole harted support to XM satelite radio. It is the best media to come down the pike since electricity. There is no substitute for it, you can pick what you want to listen to anywhere in the lower 48 and not worry about losing it.They do what is needed and if anything they should be aloud to expand more. As an over the road drive I have come to depend on their service for weather and now traffic reports too. I can tune in any of these channels to help plan my best routes and know that it is quite accurate.

Thank you.
G. Collins
